RSUA 15-Gallon Drum Packaging Enhancement

15-gallon drums of JM Roofing System Urethane Adhesive (RSUA) will now be supplied in high-density polyethylene (HDPE) drums rather than steel drums. HDPE drums are a proven packaging option that allow for improved moisture resistance, are rust-free, and improve the return process if material is over-ordered on a project. The new HDPE drums are also lighter weight.

This packaging change only affects the drums, no other changes have been made to the product or the application. The product formulation, connections and fittings, product skus, and pallet configuration remain unchanged.

New packaging shown below:

Please contact your JM representatives with any questions.
