

JM PROTECTOR® FOAM

LABOR EFFICIENT. BUDGET FRIENDLY. COLD WEATHER READY.

Combining two of our most trusted products, Protector® Foam features JM ENRGY 3® Polyisocyanurate Roof Insulation with half-inch Protector® High Density Polyisocyanurate Foam and Coated Glass Facers in ready-to-use boards with thicknesses varying from 1.8 to 4 inches.

WHY PROTECTOR® FOAM?

- **Material and labor savings**

Eliminates cost of adhering cover board to insulation.

Installation cost:

- Nearly 6% less when adhering 12 inches on center is required.
- Nearly 12% less when adhering 6 inches on center is required.
- Nearly 22% less when adhering 4 inches on center is required.

- **High compressive strength**

Provides protective layer for insulation while working with membrane above to ensure maximum performance and longevity.

- **Versatile enough for any job**

Protector® Foam is compatible with both multi-ply and single-ply systems, including those that are cold applied, adhered, self adhered, mechanically fastened and induction welded.

- **The weather is no problem**

Cover board and insulation in one homogeneous board means cold temperatures don't pose adhesion problems.
